Skills

Expertise: React || Tailwind || JavaScript ||Bootstrap

Comfortable: Express|| REST APIs || Firebase|| JWT

Familiar: Node|| MongoDB

Tools: Github || VS Code|| Vercel || Netlify || Figma

PROJECTS

- **Infinity Toys**   May 23 – Present   Live Link || Github > Client || Server
  Description of **Infinity Toys**:
    o I've implemented CRUD operation here. User can add new toys to the site and do other crud operations.
    o It has authentication functionalities which I added using firebase.
    o Infinity Toys have animations and pages are mobile responsive and UI is user interactive.

  Technology: The website is built using React for client side and for server side Express was used. For routing I used react router dom, For hosting and authentication I used firebase, Mongodb as the database.

- **Savoir Faire Cuisine**   April 23 – Present   Live Link|| Github> Client || Server
  Description of **Savoir Faire Cuisine –** A recipe hunting website:
    o **Savoir Faire Cuisine** shows recipes of different chef's data. It was a project mainly focused on react router dom with firebase integration.
    o **Savoir Faire Cuisine** lets you see detailed chef data in private sate. You can create account in the site to see the detailed data.
    o I tried to add a red theme to the website which is mobile responsive and also UI is user friendly.

  Technology: For frontend I used react and in server side I used node with express. For routing I used react router dom and authentication was done with firebase. I used mongodb as my database.

- **Job Hunting Portal**   April 23 – Present   Live Link|| Github
  Description of **Job Hunting Portal**:
    o **Job Hunting Portal** is a job portal site where I used react router dom to navigate between routes dynamically.
    o **Job Hunting Portal** lets you add a job to your list and later you can apply to those jobs.
    o **Job Hunting Portal** uses local storage to store user's job list and retrieve when necessary and this prevents losing data when reloading.

  Technology: I used react router dom for routing and local storage to store job information.
